

Name des Projekts: SARS-CoV-2 pandemic and alcohol consumption
Projektleiter*innen (e-mail): <i>Birgit Beispiel (e-mail), Max Muster (e-mail)</i> Jürgen Rehm (juergen.rehm@tu-dresden.de) Institution: TU Dresden
Kooperationspartner: UKE Hamburg, Hospital Clinic Barcelona
Thema (Titel, Kurzbeschreibung) The aim of this pan-European survey is to link alcohol intake to experiences regarding the current SARS-CoV-2 pandemic. With the outbreak of SARS-CoV-2 in Europe, political actions by national governments led to changes in daily and public life in many places, including possible changes in alcohol consumption. Since the current pandemic is an unprecedented situation with hitherto unknown consequences for everyday life, a questionnaire was developed to investigate its implications, particularly with regard to drinking. The survey resulted from a collaboration of scientists from multiple research institutes in Europe, including the Technische Universität Dresden (Germany) and the Hospital Clínic de Barcelona (Spain).
Zielstellung (angestrebte Ergebnisse) und Nutzen (hilfreich für....) To measure the impact of lockdown measures on alcohol and other substance use in Europe
Zeitraumen April - Juli
Unterstützung könnten wir noch brauchen für.... Verbreitung des Surveys um die Reichweite zu vergrößern und eine möglichst robuste Antwortbasis zu erzielen https://tu-dresden.de/mn/psychologie/ikpp/forschung/sars-cov-2-pandemie-und-alkoholkonsum?set language=de
